

**ProLight PB2H-4BDE-HWFC**  
**4W Power LED**  
**Technical Datasheet**  
**Version: 1.0**

# ProLight Opto PB2H Series

## Features

- Corrosion robustness
- SMD 3535 ceramic package
- Maximum drive current: 1200 mA
- Wide viewing angle: 145° (Batwing optical lens)
- Radiometric flux: typ. 1485 mW @ 700mA ; typ. 773 mW @ 350mA
- Photosynthetic Photon Flux: typ. 5.51  $\mu\text{mol/s}$  @ 700mA ; typ. 2.87  $\mu\text{mol/s}$  @ 350mA
- Best JEDEC Moisture Sensitivity Level 1

## Main Applications

- Horticultural Lighting
- Accent and effect lighting

## Introduction

· Phenix 3535 qualifies as the JEDEC Level 1 MSL sensitivity level and suitable for SMD process, Pb\_free reflow soldering capability, and full compliance with EU Reduction of Hazardous Substances (RoHS) legislation.

## Emitter Mechanical Dimensions

### Circuit Diagram

### Notes:

1. Electrical insulation between the case and the board is required. Do not electrically connect either the anode or cathode to the slug.
2. Drawing not to scale.
3. All dimensions are in millimeters.
4. Unless otherwise indicated, tolerances are  $\pm 0.1$ mm.
5. Please do not solder the emitter by manual hand soldering, otherwise it will damage the emitter.
6. **Please do not use a force of over 0.3kgf impact or pressure on the lens of the LED, otherwise it will cause a catastrophic failure.**

\*The appearance and specifications of the product may be modified for improvement without notice.

## Flux Characteristics, $T_j = 25^\circ\text{C}$

| Part Number<br>Emitter | Radiometric Power (mW) |      |                 |                  |        |      | PPF ( $\mu\text{mol/s}$ ) |                  |
|------------------------|------------------------|------|-----------------|------------------|--------|------|---------------------------|------------------|
|                        | @700mA                 |      | Refer<br>@350mA | Refer<br>@1000mA | @700mA |      | Refer<br>@350mA           | Refer<br>@1000mA |
|                        | Min.                   | Typ. | Typ.            | Typ.             | Min.   | Typ. | Typ.                      | Typ.             |
| PB2H-4BDE-HWFC         | 1450                   | 1485 | 773             | 2054             | 5.38   | 5.51 | 2.87                      | 7.62             |

- ProLight maintains a tolerance of  $\pm 7\%$  on flux and power measurements.
- Please do not drive at rated current more than 1 second without proper heat sink.

## Electrical Characteristics, $T_j = 25^\circ\text{C}$

| Color      | Min. | Forward Voltage $V_F$ (V) |      |                      |                       | Electrical Thermal<br>Resistance Junction to<br>Slug with efficiency is<br>73% ( $^\circ\text{C/W}$ ) |
|------------|------|---------------------------|------|----------------------|-----------------------|---|
|            |      | @700mA<br>Typ.            | Max. | Refer @350mA<br>Typ. | Refer @1000mA<br>Typ. |   |
| Royal Blue | 2.8  | 2.9                       | 3.2  | 2.8                  | 3.0                   | 2.8   |

- ProLight maintains a tolerance of  $\pm 0.1\text{V}$  for Voltage measurements.

## Optical Characteristics at 700mA, $T_j = 25^\circ\text{C}$

| Radiation<br>Pattern | Color      | Dominant Wavelength $\lambda_D$ |        |        | Total<br>included<br>Angle<br>(degrees)<br>$\theta_{0.90V}$ | Viewing<br>Angle<br>(degrees)<br>$2\theta_{1/2}$ |
|----------------------|------------|---------------------------------|--------|--------|---|--|
|                      |            | Min.                            | Typ.   | Max.   |   |  |
| Batwing              | Royal Blue | 448 nm                          | 452 nm | 458 nm | 170   | 145  |

- ProLight maintains a tolerance of  $\pm 1\text{nm}$  for dominant wavelength measurements.

## Absolute Maximum Ratings

| Parameter  | Royal Blue                                |
|--|---|
| DC Forward Current (mA)                                      | 1200                                      |
| Peak Pulsed Forward Current (mA)                             | 1500 (less than 1/10 duty cycle@1KHz)     |
| ESD Sensitivity<br>(HBM per MIL-STD-883E Method 3015.7)      | 2KV                                       |
| LED Junction Temperature                                     | 120°C                                     |
| Operating Board Temperature<br>at Maximum DC Forward Current | -40°C - 105°C                             |
| Storage Temperature  | -40°C - 120°C                             |
| Soldering Temperature  | JEDEC 020c 260°C                          |
| Allowable Reflow Cycles                                      | 3   |
| Reverse Voltage  | Not designed to be driven in reverse bias |

## Radiometric Power Bin Structure at 700mA

| Color      | Bin Code | Radiometric Power (mW) |      | PPF (μmol/s) |      | PPF/W (μmol/J) | Available Color Bins |
|------------|----------|------------------------|------|--------------|------|----------------|----------------------|
|            |          | Min.                   | Max. | Min.         | Max. | Typ.           |                      |
| Royal Blue | H        | 1450                   | 1500 | 5.38         | 5.57 | 2.70           | All                  |
|            | J        | 1500                   | 1550 | 5.57         | 5.75 | -              | [1]                  |
|            | K        | 1550                   | 1640 | 5.75         | 6.08 | -              | [1]                  |

- ProLight maintains a tolerance of  $\pm 7\%$  on flux and power measurements.
- The flux bin of the product may be modified for improvement without notice.
- <sup>[1]</sup> The rest of color bins are not 100% ready for order currently. Please ask for quote and order possibility.

## Dominant Wavelength Bin Structure at 700mA

| Color      | Bin Code | Minimum Dominant Wavelength (nm) | Maximum Dominant Wavelength (nm) |
|------------|----------|----------------------------------|----------------------------------|
| Royal Blue | 5        | 448                              | 453                              |
|            | 6        | 453                              | 458                              |

- ProLight maintains a tolerance of  $\pm 1$ nm for dominant wavelength measurements.

## Forward Voltage Bin Structure at 700mA

| Color      | Bin Code | Minimum Voltage (V) | Maximum Voltage (V) |
|------------|----------|---------------------|---------------------|
| Royal Blue | A        | 2.8                 | 2.9                 |
|            | B        | 2.9                 | 3.0                 |
|            | D        | 3.0                 | 3.1                 |
|            | E        | 3.1                 | 3.2                 |

- ProLight maintains a tolerance of  $\pm 0.1$ V for Voltage measurements.

## Qualification Reliability Testing

| Stress Test                                 | Stress Conditions   | Stress Duration | Failure Criteria        |
|---|---|-----------------|-------------------------|
| Room Temperature Operating Life (RTOL)      | 25°C, $I_F = \text{max DC}$ (Note 1)  | 1000 hours      | Note 2                  |
| Wet High Temperature Operating Life (WHTOL) | 85°C/60%RH, $I_F = \text{max DC}$ (Note 1)                                  | 1000 hours      | Note 2                  |
| Wet High Temperature Storage Life (WHTSL)   | 85°C/85%RH, non-operating   | 1000 hours      | Note 2                  |
| High Temperature Storage Life (HTSL)        | 110°C, non-operating  | 1000 hours      | Note 2                  |
| Low Temperature Storage Life (LTSL)         | -40°C, non-operating  | 1000 hours      | Note 2                  |
| Non-operating Temperature Cycle (TMCL)      | -40°C to 120°C, 30 min. dwell, <5 min. transfer                             | 200 cycles      | Note 2                  |
| Mechanical Shock                            | 1500 G, 0.5 msec. pulse, 5 shocks each 6 axis                               |                 | Note 3                  |
| Natural Drop                                | On concrete from 1.2 m, 3X  |                 | Note 3                  |
| Variable Vibration Frequency                | 10-2000-10 Hz, log or linear sweep rate, 20 G about 1 min., 1.5 mm, 3X/axis |                 | Note 3                  |
| Solder Heat Resistance (SHR)                | 260°C ± 5°C, 10 sec.  |                 | Note 3                  |
| Solderability                               | Steam age for 16 hrs., then solder dip at 260°C for 5 sec.                  |                 | Solder coverage on lead |

### Notes:

1. Depending on the maximum derating curve.
2. Criteria for judging failure

| Item  | Test Condition        | Criteria for Judgement |                     |
|---|-----------------------|------------------------|---------------------|
|   |                       | Min.                   | Max.                |
| Forward Voltage ( $V_F$ )                       | $I_F = \text{max DC}$ | --                     | Initial Level x 1.1 |
| Luminous Flux or Radiometric Power ( $\Phi_V$ ) | $I_F = \text{max DC}$ | Initial Level x 0.7    | --                  |
| Reverse Current ( $I_R$ )                       | $V_R = 5V$            | --                     | 50 $\mu A$          |

\* The test is performed after the LED is cooled down to the room temperature.

3. A failure is an LED that is open or shorted.

## Recommended Solder Pad Design

Standard Emitter

- All dimensions are in millimeters.
- Electrical isolation is required between Slug and Solder Pad.

## Reflow Soldering Condition

| Profile Feature   | Sn-Pb Eutectic Assembly          | Pb-Free Assembly                 |
|---|----------------------------------|----------------------------------|
| Average Ramp-Up Rate<br>( $T_{Smax}$ to $T_P$ )   | 3°C / second max.                | 3°C / second max.                |
| Preheat <ul style="list-style-type: none"> <li>- Temperature Min (<math>T_{Smin}</math>)</li> <li>- Temperature Max (<math>T_{Smax}</math>)</li> <li>- Time (<math>t_{Smin}</math> to <math>t_{Smax}</math>)</li> </ul> | 100°C<br>150°C<br>60-120 seconds | 150°C<br>200°C<br>60-180 seconds |
| Time maintained above: <ul style="list-style-type: none"> <li>- Temperature (<math>T_L</math>)</li> <li>- Time (<math>t_L</math>)</li> </ul>  | 183°C<br>60-150 seconds          | 217°C<br>60-150 seconds          |
| Peak/Classification Temperature ( $T_P$ )   | 240°C                            | 260°C                            |
| Time Within 5°C of Actual Peak Temperature ( $t_p$ )  | 10-30 seconds                    | 20-40 seconds                    |
| Ramp-Down Rate  | 6°C/second max.                  | 6°C/second max.                  |
| Time 25°C to Peak Temperature   | 6 minutes max.                   | 8 minutes max.                   |

- We recommend using the M705-S101-S4 solder paste from SMIC (Senju Metal Industry Co., Ltd.) for lead-free soldering.
- Do not use solder pastes with post reflow flux residue > 47%. (58Bi-42Sn eutectic alloy, etc) This kind of solder pastes may cause a reliability problem to LED.
- All temperatures refer to topside of the package, measured on the package body surface.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- Reflow soldering should not be done more than three times.
- When soldering, do not put stress on the LEDs during heating.
- After soldering, do not warp the circuit board.

## Emitter Reel Packaging

There shall be a minimum of 160mm (6.3 inch) of empty component pockets sealed with cover tape.

Loaded Pockets

There shall be a minimum of 400mm (15.7 inch) of empty component pockets sealed with cover tape.

### Notes:

1. Drawing not to scale.
2. All dimensions are in millimeters.
3. Unless otherwise indicated, tolerances are  $\pm 0.1\text{mm}$ .

# Emitter Reel Packaging

**Notes:**

1. Empty component pockets sealed with top cover tape.
2. 1,000 pieces per reel.
3. Drawing not to scale.
4. All dimensions are in millimeters.

## Precaution for Use

- Storage  
Please do not open the moisture barrier bag (MBB) more than one week. This may cause the leads of LED discoloration. We recommend storing ProLight's LEDs in a dry box after opening the MBB. The recommended storage conditions are temperature 5 to 30 °C and humidity less than 40% RH. It is also recommended to return the LEDs to the MBB and to reseal the MBB.
- The slug is is not electrically neutral. Therefore, we recommend to isolate the heat sink.
- **We recommend using the M705-S101-S4 solder paste from SMIC (Senju Metal Industry Co., Ltd.) for lead-free soldering.**
- **Do not use solder pastes with post reflow flux residue>47%. (58Bi-42Sn eutectic alloy, etc) This kind of solder pastes may cause a reliability problem to LED.**
- Any mechanical force or any excess vibration shall not be accepted to apply during cooling process to normal temperature after soldering.
- Please avoid rapid cooling after soldering.
- Components should not be mounted on warped direction of PCB.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a heat plate should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- This device should not be used in any type of fluid such as water, oil, organic solvent and etc. When cleaning is required, isopropyl alcohol should be used.
- When the LEDs are illuminating, operating current should be decide after considering the package maximum temperature.
- The appearance, specifications and flux bin of the product may be modified for improvement without notice. Please refer to the below website for the latest datasheets.

## Handling of Silicone Lens LEDs

Notes for handling of silicone lens LEDs

- Please do not use a force of over 0.3kgf impact or pressure on the silicone lens, otherwise it will cause a catastrophic failure.
- The LEDs should only be picked up by making contact with the sides of the LED body.
- Avoid touching the silicone lens especially by sharp tools such as Tweezers.
- Avoid leaving fingerprints on the silicone lens.
- Please store the LEDs away from dusty areas or seal the product against dust.
- When populating boards in SMT production, there are basically no restrictions regarding the form of the pick and place nozzle, except that mechanical pressure on the silicone lens must be prevented.
- Please do not mold over the silicone lens with another resin. (epoxy, urethane, etc)

## Disclaimers

ProLightopto Technology has made every reasonable effort to ensure the accuracy of the information in this datasheet. However, it should be understood that this information is for guidance only and does not constitute any offer or part of a contract.

ProLightopto Technology does not guarantee or accept any legal liability for the accuracy, completeness, or usefulness of any information, product, technology, or process disclosed in this datasheet. The company reserves the right to make changes or improvements to this datasheet at its discretion.

Unless this datasheet is incorporated into a formal contract, customers should not rely on the information as a binding commitment to any specifications or product parameters by ProLightopto Technology. Customers are advised to verify that the information is current and complete before entering into any contract or acknowledging any purchase order. Therefore, all products described herein are subject to ProLightopto Technology's terms and conditions at the time of order acknowledgment.

Unless agreed upon by contractual agreement, not all parameters of each product are necessarily tested. ProLightopto Technology does not warrant or grant any license, either expressed or implied, under its patent rights or the rights of others.

Reproduction of the information contained herein is permitted only if done without any modifications or alterations. Altering this information and reproducing it is considered an unfair and deceptive business practice. ProLightopto Technology is not responsible or liable for any such altered documentation.

Reselling ProLightopto Technology's products with statements that differ from or exceed the parameters specified by ProLightopto Technology voids all express or implied warranties for the associated product or service and is considered an unfair and deceptive business practice. ProLightopto Technology is not responsible or liable for any such statements.

ProLightopto Technology's products are not authorized for use as critical components in life support devices or systems without explicit written approval from ProLightopto Technology.

For the purposes of this disclaimer :

1. Life support devices or systems are defined as those intended for surgical implant into the body or those that support or sustain life. Their failure, when used according to instructions for use provided in the labeling, can reasonably be expected to result in significant injury to the user.
2. A critical component is any component of a life support device or system whose failure can reasonably be expected to cause the failure of the device or system, or to affect its safety or effectiveness.
